Commentary on Data

Attachment A	Daily Flare Monitoring Data
• A-1	Data Spreadsheet
• A-2	Data Graphs
Attachment B	Work Completed and Planned
Attachment C	Carbon Monoxide Maps
Attachment D	Hydrogen Maps
Attachment E	Settlement Front Map
Attachment F	Gas Wellfield Data
• F-1	GEM Data Spreadsheet
• F-2	Maximum Temperature Spreadsheet
• F-3	Lab Analyses Spreadsheet
Attachment G	Wellhead Temperature Maps
Attachment H	Summary of Odor Complaints
Attachment I	Liquid Characterization Data
Attachment J	Liquid Transport Manifest Logs
Attachment K	North Quarry Select Well Laboratory Data

Provided Separately:

- Flare Raw Data Excel Spreadsheet
- Gas Wellfield Raw Data Excel Spreadsheet

August 20, 2013

Commentary on Data, August 20, 2013

The following observations and comments are offered for the July 2013 data:

Gas Volume

- As seen in Attachment A-2, gas collection volume continued to increase (from about 5,500 CFM in February 2013 to about 9,500 CFM at the end of July 2013). This may be attributable to increased gas collection efficiency resulting from the additional capped area. Flare inlet temperature had gradually increased in April and May but achieved a stable level in June 2013, and decreased somewhat overall in July 2013.

Gas Quality

- Attachment F-2 and G indicate an overall trend to higher gas wellhead temperatures in the South Quarry area. This is attributable to improved gas collection efficiency, and capture of more generated heat.
- Five wells in the North Quarry area have historically run at or over 131° F at times and four of those currently exhibit somewhat elevated temperatures as indicated on the July map in Attachment G (GEW-43R, -53, -54, and -55); review of weekly gas quality in Attachment F-1 reveals that all of these gas wells have no oxygen and have normal methane and carbon dioxide levels suggesting healthy wellfield conditions at those locations. GEW-54 (maximum June temperature of 155 degrees Fahrenheit) has been monitored for temperature on a weekly basis and will be until such time the temperature falls below 140°F; by the end of July, GEW-54 wellhead temperature was 145° F.
- As discussed in the July 20, 2013 Monthly Report, Bridgeton Landfill will conduct carbon monoxide laboratory monitoring of GEW-54 on a monthly basis until the temperature falls below 140 degrees Fahrenheit. In addition, we collected one round of monitoring for carbon monoxide at the surrounding wells, GEW-40, -41R, -43R, -53, and -55. Results of this monitoring are (July 22 event) provided in Appendix K along with a previous round of results for samples collected on June 6. The results indicate no detection or very low levels of carbon monoxide which suggest normal conditions at these gas wells.
- As discussed in the July 20, 2013 Monthly Report, Bridgeton Landfill conducted one round of hydrogen monitoring at GEW-40, -41R, -43R, -53, -54, and -55. Results have been presented in Attachment K.

Bridgeton Landfill will continue to collect weekly temperatures and monthly CO measurements at any North Quarry wells that exhibit temperatures over 145° F (currently, that is just GEW-54). The weekly collection of temperatures and monthly collection of CO measurements will cease after the well temperatures are recorded below 140 degrees Fahrenheit.

- Attachment F-1 includes data that shows that two vertical gas extraction wells had oxygen levels over 5% at one or more weekly monitoring events in July. GEW-1 was

investigated with a camera and found to be totally pinched above the perforation level suggesting that the well is blocked and indications of oxygen at the wellhead are from the wellhead apparatus and not from the waste mass; this well has been shut off and will be scheduled for replacement. GEW-62R in the South Quarry had one event with oxygen slightly higher than 5%, but was adjusted to bring the level to zero; this well has been identified as requiring wellhead repair as a mechanical problem has allowed minute quantities of oxygen into the wellhead (but not into the waste mass) during some sampling events.

Settlement

- There is no meaningful settlement data to evaluate with this report due to the widespread grading activities that occurred in July for the capping project. Forward-going settlement monitoring will be performed at grid paint marks on the synthetic cap eliminating the possibility of influence from grading activities.
- As previously discussed, prior monitoring showed an overall slowing of advancement toward the neck area with data since February 2013 indicating an average movement in the northern directions of 0.49 feet per day.

Complaints

- As seen in Attachment H, there were 27 contacts made using complaint-reporting communication lines (vs. 43 in June and 76 in May). Nine of these contacts were not related to odor.

DATA GRAPHS

Zink Enclosed Flare Flow (scfm)*

—x— Zink Enclosed Flare Flow (scfm)*

*Flow is based on tabulated flow data collected daily.

Callidus Flare Flow (scfm)*

—x— Callidus Flare Flow (scfm)*

*Flow is based on tabulated flow data collected daily.

Candlestick Flare Flow (scfm)*

—*— Candlestick Flare Flow (scfm)*

*Flow is based on tabulated flow data collected daily.

East Auxillary Candlestick Flare Flow (scfm)*

*Flow is based on tabulated flow data collected daily.

Total Combined Flow (scfm)*

—x— Total Combined Flow (scfm)*

*Combined flow is based on tabulated flow data collected daily from each device.

Inlet Gas and Temperature*

*Gas data collected from Laboratory Reports. Temperature data collected from GEM 2000 field readings.

Inlet Carbon Monoxide*

*Data collected from Laboratory Reports.

Combined Inlet Methane (GEM 2000)*

Combined Inlet Methane (GEM 2000)*

*Gas data collected from GEM 2000 field monitoring instrument.

Combined Inlet Oxygen (GEM 2000)*

Combined Inlet Oxygen (GEM 2000)*

*Gas data collected from GEM 2000 field monitoring instrument.

ATTACHMENT B

WORK COMPLETED AND PLANNED

Bridgeton Landfill, LLC

Monthly Summary of Work Completed and Planned

Work Completed in July 2013

Gas Collection and Control System

- Continue modification required for capping
- Lifted laterals and headers above cap as necessary
- Continued operation and maintenance of GCCS System

Leachate Management System

- Began site preparation for construction of four planned one-million gallon leachate storage tanks
- Preparation of design of pretreatment facility
- Continued operation of 316,000 gallon storage and aeration tank
- Removed substantial volume of leachate backlog and frac tanks
- Continued operation of clarifier
- Started planning and design of upgraded leachate conveyance system

Gas Interceptor Wells/Temperature Monitoring Probes

- Continued routine operation of previously installed features

Cap Related

- Installed approximately 35 acres of cap and subcap features on South Quarry in July
- Connected temporary vacuum to near surface collectors and subcap features

Other Work Items

- All sedimentation and erosion control features completed

Work Planned for August 2013

Gas Collection and Control System

- Final planning for installation of the two candle stick flare.
- Continued operation and maintenance of GCCS system.

Leachate Management System

- Continue to monitor conditions of LCS-1, LCS 3 and LCS 4. Plan to install Black Hawk pumps (8 gpm) LCS-1 and LCS-3.
- Finalize design for new force main system upgrades.
- Continue to reduce on-site backlog of leachate and remove frac tanks.
- Continue or begin pilot studies on: clarifier, Electro Coagulation, and biological reactor treatment processes
- Installation and operation of a Thermal Oxidizer Unit
- Begin pilot study of filter press

Gas Interceptor Wells/Temperature Monitoring Probes

- Continue routine operation and maintenance

Cap Related

- Complete installation of South Quarry Cap (completed August7, 2013)

SETTLEMENT FRONT MAP

GENERAL NOTES
TOPOGRAPHY SHOWN BASED ON PHOTOGRAPHY DATED 2-23-2013

SETTLEMENT NOTES
CONTOURS ARE OF CHANGE IN ELEVATION FROM 6-21-13 TO 7-26-2013 PERFORMED AT GRID POINTS USING GPS METHODS
SETTLEMENT IS REPORTED AS A NEGATIVE CHANGE IN ELEVATION
POINTS SHOWN REPRESENT ONLY POINTS WHERE GROUND ELEVATION CHANGES ASSOCIATED WITH CAPPING OR CONSTRUCTION WERE OBSERVED BY THE SURVEYOR - ALL POINTS MEETING THIS DESCRIPTION ARE SHOWN
SURVEY OF 7-26-13 WILL BE USED AS BASELINE FOR FUTURE MONTHS

LEGEND

- EXISTING TOPOGRAPHIC CONTOUR
- GAS WELL
- TWP
- SETTLEMENT GRID SURVEY POINT

SUMMARY OF ODOR COMPLAINTS

July 1, 2013-July 5, 2013

Complaints Forwarded by MDNR

Resident: Jennifer Smith

Message: Was in Spanish Village Park yesterday 7/1/13, the smell was horrible. Putrid, rotten mixed with chemicals of some kind. I was nauseated the entire time there and left with a headache that lasted hours. I do not live in the area (thank goodness) as if that made me sick in 4 hours, I can't imagine having to be in it 24 hours per day.

Resident: Karen

Message: There is radioactive nuclear waste. This is near enough to the river to possibly be contaminating it. There is a toxic smell, and whatever toxic gasses/fumes that goes with it, that blows where the wind blows. It smells awful! Burning eyes, throats. People are coming down with illnesses they've not had before. This needs to be removed and moved to a protected site!

Follow-up: With no contact information, we were unable to respond.

Resident: Paula Schneider

Message: The odor is horrific...I can't even go outside without feeling nauseous... This is affecting my health and I want answers!!! As a resident, I deserved to know what you are doing to the health of my family...

Follow-up: We called to her to reiterate we are working with MDNR and DHSS to make sure everything remains safe for residents and employees. We apologized for the odor, but completing the capping system should significantly reduce odors.

Resident: Scott Schuchard

Message: Severe odor in the air from the landfill... odor has been mostly an intermittent problem at my location (Brookside Neighborhood in Maryland Heights), however the odor has been fairly continuous since I returned to St. Louis on 6/30/2013

Follow-up: We called to update him on the capping project. We explained that work and weather could be contributing to increased odors, but everything is safe. We apologized for the odor, but completing the capping system should significantly reduce odors.

Resident: Bob Nowlin

Message: I live in Spanish Village Subdivision and the odors here from the Bridgeton Landfill have been worse than usual the past few days. Tonight the smell hit us when we turned off I-70 onto the I-270/St Charles Rock Rd exit and followed us all the way home. That was after we had rain, which we are mistakenly being told will settle it back to the ground.

Follow-up: We followed up and updated him on the capping project. We explained that work and weather could be contributing to increased odors, but everything is safe. We apologized for the odor, but completing the capping system should significantly reduce odors.

Resident: Victoria Hischke

Message: The smell coming from the Westlake landfill is putrid! The smell is very overwhelming to me and my family. We cannot go outside, or have our windows open because of it. What also concerns me is that it was so bad this past weekend. 6/29-30/2013. Also, as a matter of concern, I had to leave work yesterday (Monday) sick and I and my daughter are both home sick from work today (7/2/2013) This is NOT good.

Follow-up: We reached Ms. Hischke's voicemail and left a message explaining that received her message from the Missouri Department of Natural Resources. We apologized for the odor and said we are working to place a capping system over the landfill that should significantly reduce odors. We are over halfway complete installing the capping system. Additionally, we are working with MDNR and the Missouri Department of Health and Senior Services to make sure the air is safe for local residents and workers. To this point, all air quality tests have shown the air is safe.

Resident: Kathy Bell

Message: The odor from the landfill has been practically unbearable for the last several days. It is extremely strong, pungent, foul and toxic-smelling. It is so bad that I either hold my nose, or put something over my nose. It is much, much more than a "nuisance odor", and makes me a prisoner in my own home.

Resident: Karen Nickel

Message: Was work being performed over the weekend of 6-28-2013 at the landfill? Why are we not getting any relief from the smell as it seems to have not gone completely away since Friday 6-28-2013? Why have I not seen any "high odor" alerts posted?

Resident: Laura Willingham

Message: We, the residents of Bridgeton, MO are being exposed to never ending odors (and god only knows what toxins that are causing these odors). In the past, it has been an off and on type of thing, but the odors that started on June 28th are still around today.

Resident: Susan Folle

Message: I was at Spanish Trails Park from 10:51 am to 2:26 pm. The sickening stench came in waves but lingered. When it first hit me, I immediately got a severe allergy headache and burning in my nostrils with nausea at the worst. I cannot believe that air was safe. If so, why did I have physical symptoms? Within 45 minutes of leaving there, my nose stopped burning but the headache lingered. Surely this air pollution isn't legal?

Resident: Megan Richardson

Message: What's going on at the Bridgeton Landfill that he stinks SO bad? I thought the underground work was done there. Smells worse than when they were working and seems to be a 24/7 issue.

Voicemails

Resident: Crystal

Voicemail: Crystal left a message, asking how much she would be charged to drop off some garbage, mostly paper, to Bridgeton Landfill.

Follow-up: We reached Crystal's voicemail and left her a message with customer service's phone number and said they would be able to answer her questions.

Resident: Carol Herget

Voicemail: Ms. Herget asked for a return call.

Follow-up: Ms. Herget said she attended a meeting and that she felt that they were led in the wrong direction. She was very upset, and before we had a chance to explain the work, that the air safe was and that we would share her concerns, she said she needed to give us a call back.

Emails

Resident: Eric Shultis

Resident email: We have an ongoing problem of being "missed" for yard waste pick up. Each time it is a hassle to contact the company having to go through several prompts and then 2 different service reps waiting for each on hold. I am not willing to do this anymore. I have 2 bins that are full almost weekly in keeping up my yard. When these are not picked up, I have to store yard waste and then I am behind. We have complained repeatedly to Allied Waste, but the problem persists year after year without any known reason as to why. I will no longer store waste, but am going to pile it up in the street when I am missed. I will not put this into the bins. Eric Shultis [address redacted]

Response: Our customer service team should be able to assist you with yard waste pickup. They can be reached at 636-947-5959 or via email at:
<http://www.republicservices.com/Corporate/Contact/customer-service.aspx>.

Resident response: I have already sent you an email, and I and my wife have made many calls, so I am not interested in calling again. Are the trucks not going down my street? Are they simply not looking and driving by? These are the questions we have asked each time we are overlooked, and there is never a reason. Our trash is never missed, so there must be some reason that our yard waste DOES get missed. I would be happy to hear that you have found out what the problem is, and that it is fixed.

Response: Customer service is going to reach out to Mr. Shultis.

Resident: Steve Maedge

Resident email: In all of these updates I receive the statement is made that after the capping project is finished it will HELP with the odors and smell. You never mention eliminating the odors or smells. What you are saying is you cannot get rid of STINK ever, is that correct? If this is true, what is the plan for this site?

July 6, 2013-July 12, 2013

Complaints Forwarded by MDNR

Resident: Kathy Bell

Message: The intense odor last night and early into this morning, was one of the strongest, most obnoxious, toxic, foul, stench I have experienced. It was nauseating, and felt like a fog of noxious, dangerous chemicals were engulfing me.

Follow-up: Ms. Bell is a plaintiff in the lawsuit so we cannot legally respond.

Resident: Debi Disser

Message: I was on my way home from work entered highway 70 at Earth City heading east bound. As I topped the hill to cross over highway 270, the toxic fumes forced me to roll up my windows and go to recirculating air [did not totally stop the fumes but cut it down]. The fumes lasted till I drove under the Fee Rd overpass. The fumes were a mixed smell of dead skunk, rotting garage and burnt metallic. It is days like this, in which I am extra concerned about the families living in Spanish Village, around and in the Creve Coeur Mill Rd area near Mckelvey and the people who work, shop and eat along the St. Charles Rk Road from Taussing Rd all the way up past Harmon Lane and those along Natural Bridge Road.

Voicemails

Resident: Rusty

Voicemail: Rusty left a voicemail, explaining that Neptune Systems offers leachate evaporators and he is interested in doing business with the landfill.

Follow-up: We provided Rusty with the Bridgeton Landfill address where he can send more information and said that we would make sure it gets to the appropriate parties.

Resident: Make Gale

Voicemail: Mr. Gale left a voicemail, explaining that his company has 15 years of experience in landfill construction/excavating. He was wondering if Bridgeton Landfill needed any equipment to rent or service from his construction company.

Follow-up: We provided Mr. Gale with the landfill address so he can send his company's information and told him we would make sure it gets to the appropriate parties.

Resident: Matthew Jacobs

Voicemail: Mr. Jacobs left a voicemail asking if Bridgeton Landfill still accepted garbage drop-offs, and if so, how much? He has a load of lumber he would like to bring by.

Follow-up: We provided Mr. Jacobs with customer service's number and told him they would be able to answer his questions.

Emails

Resident: Jason Myrick

Email: I have not seen a recent bill arrive and I came home to my trash cans being taken today. I would like to know why they were taken, why I haven't received a bill and have my trashcans returned

Response: Please contact our Customer Service department at 636-947-5959 or:
www.republicservices.com/Corporate/Contact/customer-service.aspx<<https://webmail.republicservices.com/owa/www.republicservices.com/Corporate/Contact/customer-service.aspx>>. They should be able to answer your questions and help address your problem.

July 13, 2013-July 19, 2013

Complaints Forwarded by MDNR

Resident: Wendy Lumetta

Message: There is a fire at Bridgeton Landfill that is getting closer every day to radioactive waste. There is a noxious smell that is getting worse, and the fire is getting closer to the radioactive waste that was illegally dumped there decades ago. There have been no consequences for the crime committed, and now something other than what the fire expert recommended is being considered. For the health and safety of ALL citizens in the area, PLEASE do not allow another day to pass without DNR enforcing Republic to do the most responsible, and not the most cost-effective solution.

Voicemails

Resident: Britney Jones

Voicemail: Ms. Jones called with questions about the lodging program. She said she faxed her form to DRP and that she and her family stayed with friends.

Follow-up: We took Ms. Jones address to determine if she is eligible for the \$125 reimbursement and forwarded on her information to DRP. Jennifer with DRP was in contact with Ms. Jones about the lodging program.

Emails

Resident: Denyse DuBrucq

Resident email in response to 7/12 email update: And the harvesting of fuel from the Bridgeton Landfill will end the possible smells and other waste and allow capturing metals and glass and brick components after the organics are gone. Why not just let CryoRain Inc. get the organics out of the way once your vinyl cover is in place and then the community can sell the fuels we collect to fund the community and maybe split it with Republic Services partially paying your bill to the community in the future.

Response: In an email exchange on May 17, we informed Ms. DuBrucq that we have a comprehensive plan to handle to the subsurface smoldering event. We did not respond to her further.

July 20, 2013-July 26, 2013

Emails

Resident: Rusty Loyd

Email: I'm trying to verify that you received info on the Evaporator; I also read where you are having issues with odor control? The Evaporator is also used for odor control at landfills, we would like to schedual a demo, please advise.

Response: We shared Mr. Loyd's email with the Bridgeton Landfill team who will handle any response.

July 27, 2013-July 31, 2013

Complaints Forwarded by MDNR

Resident: Debi Disser

Message: At approx. 8:40 am today while walking from my car to my office; the Fumes from the Bridgeton landfill were strong enough to have me cover my nose and hold my breath. The fumes do not usually settle here in our complex which is what made it so noticeable.

Emails

Resident: Daniel Layton

Email in response to July 26 update: I have a question. Why can't garbage either be burned or chopped up?? It can be burned & smoke from that filtered? Chopped up would be easier to dispose of!

Response: Thank you for your inquiry. You are correct; some trash can be incinerated and/or compacted. The Bridgeton Landfill is a closed landfill and we have not accepted any waste at this location in a number of years.

Email in response to our follow up: What about where the trash is going now??

Response: The type of waste materials determines the best solution for managing waste. We strive to reduce, reuse and recycle as much waste as possible, but some waste can still remain. Some of the remaining waste materials can be incinerated and/or compacted, while other waste materials may need to be disposed of in a landfill.

ATTACHMENT I

LIQUID CHARACTERIZATION DATA

The Liquid Characterization Data for July 2013 consists of 2015 pages of laboratory results.

In order to make this Monthly Report a manageable electronic document, the Liquid Characterization Data will be provided in separate file(s).
