RE: New Source Review Permit Amendment - Permit Number: 042018-005A
Project Number: 2018-04-051; Installation Number: 189-0312

Dear Ms. Fanning:

The Air Pollution Control Program has received your May 3, 2018 request to amend Construction Permit 042018-005 to provide clarification on the twice monthly testing requirement and to remove emission point EP020. EP020 is used to identify a portable generator unit. As a portable unit, it is not included in stationary source permitting. Originally, the permit stated testing shall be conducted the 1st and 15th of each month. It was not our intent to require testing on those specific dates, but for testing to occur twice per month, spread out during the month. This project will amend the permit to clarify our intent and remove EP020. Please replace the specified pages of the permit with the amended pages.

If you were adversely affected by this permit decision, you may be entitled to pursue an appeal before the administrative hearing commission pursuant to Sections 621.250 and 643.075.6 RSMo. To appeal, you must file a petition with the administrative hearing commission within thirty days after the date this decision was mailed or the date it was delivered, whichever date was earlier. If any such petition is sent by registered mail or certified mail, it will be deemed filed on the date it is mailed; if it is sent by any method other than registered mail or certified mail, it will be deemed filed on the date it is received by the administrative hearing commission, whose contact information is: Administrative Hearing Commission, United States Post Office Building, 131 West High Street, Third Floor, P.O. Box 1557, Jefferson City, Missouri 65102, phone: 573-751-2422, fax: 573-751-5018, website: www.oa.mo.gov/ahc.

SPECIAL CONDITIONS:

The permittee is authorized to construct and operate subject to the following special conditions:

Table 1: LFG sulfur content sampling frequency

SO ₂ Emissions	Sampling shall be performed a minimum of...
For the first six months after the effective date of this permit or until 12 month rolling emissions are less than or equal to 75, whichever is later:	Twice per month, with testing being between 12 and 18 days apart.
If 12 month rolling emissions are less than 75 but greater than or equal to 50:	Monthly.
If 12 month rolling emissions are less than 50.	Annually, to be conducted between 11 and 13 months from the previous test.

5. **Leachate Management System Sulfur Emissions**
 Within 60 days after the issuance date of this permit, the permittee shall perform testing to quantify the volatilized sulfur in the leachate tanks. Within 30 days of the testing date, the permittee shall submit all documentation for the testing. This documentation shall include, but is not limited to, the following information. If the testing results indicate the volatilized sulfur is greater than 1.7%, the permittee shall submit an application for a permit amendment.
 - A. Testing date and location;
 - B. Sampling procedures and chain of custody;
 - C. Field data sheets; and
 - D. Sample analysis procedures, calculations, and results.

6. **Record keeping**
 - A. **Plant Wide Sulfur dioxide emissions**
 The permittee shall use Attachment Actual SO₂ Emissions, or equivalent, to determine the monthly SO₂ emissions from the entire installation. This calculation shall be used to determine compliance with the emission limitation in Special Condition #2.
 - B. The permittee shall maintain all records required by this permit for not less than five years and shall make them available immediately to any Missouri Department of Natural Resources' personnel upon request.

7. **Exceedances**
 If the records required by this permit show the permittee exceeds the SO₂ emission limitations established in Special Condition # 2, the permittee shall submit an application to obtain a new construction permit, which is based upon the current level of emissions, within 60 days of the date the emission limit is exceeded.

- Emission testing is required as a part of this permit. Testing may be required as part of other state, federal or applicable rules.
- Approval of this permit is recommended with special conditions.

INSTALLATION DESCRIPTION

Bridgeton Landfill, LLC owns and operates an inactive municipal solid waste landfill located at 13570 Saint Charles Rock Road in Bridgeton, Missouri. Bridgeton began landfilling operations in 1952 and has been closed since 2005, with a final capacity of approximately 17,000,000 cubic yards. Current operations at the inactive landfill facility are focused on managing gas and liquids from the landfill. Landfill gas is managed and controlled through the use of a gas collection and control system (GCCS). Additionally, the facility treats leachate onsite at a leachate pretreatment plant (LPTP). LPTP emissions are controlled by two natural gas fired thermal oxidizers, 2.75 MMBtu/hr each, which are permitted under Air Pollution Control Program project 2014-08-008, (St. Louis County permits 7864 and 7865). There are various other emission units onsite, with a complete listing in Table 2 below.

Table 2: Emission points and descriptions

Emission Point	Unit Description
EP-011	Flare #1: 3,500 SCFM John Zink open candlestick flare, installed 2012.
EP-012	Flare #2: 4,000 SCFM John Zink open candlestick flare, installed 2013.
EP-013	Flare #3: 4,000 SCFM John Zink open candlestick flare, installed 2013.
EP-014	Flare LFG CSU: 2,500 SCFM LFG Specialties open candlestick flare, installed 2013.
EP-016a	316,000 gallon leachate treatment tank
EP-017a	4-1 million gallon leachate treatment tanks (Tanks 1 through 4)
EP-018a	LMS RTO #1: 2.75 MMBtu/hr Cycle Therm regenerative thermal oxidizer used to control emissions from Leachate Management System (LMS) pretreatment and aeration tanks.
EP-018b	LMS RTO #2: 2.75 MMBtu/hr Cycle Therm regenerative thermal oxidizer used to control emissions from Leachate Management System (LMS) pretreatment and aeration tanks.
EP-019	1000 kW emergency generator, Caterpillar Model No. SR5, Engine Model C32 TA, 4 stroke, 32.10 Displacement, 12 cylinder. Combusts #2 fuel oil. Located in main flare yard.
EP-021	543 kW emergency generator, Perkins Model 2506C-E15TAG3. Combusts #2 fuel oil. Located at
EP-I09	Storage tank, #2 fuel oil, 500 gallon capacity
EP-I10	24 leachate frac tanks
EP-I11	LMS treated leachate tank, discharges to MSD, 97,000 gallon capacity

Attachment Actual SO₂ Emissions

oxidizer units. Emissions from the thermal oxidizers (EP-RTO#1 and RTO#2) are not included here, as they are included in the calculation of

$SO_{2-EmGen}$ = SO_{2-LMS} . SO₂ emissions from the combustion of #2 fuel oil in the emergency generators, and any other sources that combust #2 fuel oil. For the emergency generators, emissions shall be calculated by using the following emission factors, and multiplying by the number of hours each engine is used in the specified time period. These emission factors are based a fuel oil sulfur content of 15 ppmv, and the rated horsepower of each engine.

Emergency Generator	Emission factor (ton SO ₂ /hour)	Ef Source
EP-019	7.97×10^{-6}	AP42, Table 3.4-1
EP-021	2.55×10^{-4}	AP42, Table 3.4-1

SO_{2-LMS} = SO₂ emissions from the leachate management system process. Includes natural gas combustion and volatized sulfur in leachate tanks. Volatized sulfur emissions are estimated based on testing data which indicates 99 tons per year of sulfur passes through the leachate system, of which 1.7% volatizes. Each ton of volatized sulfur creates two tons of SO₂ when combusted. Potential SO₂ emissions from volatized sulfur are estimated at 3.37 tons/year (0.28 tons/month). Natural gas combustion emissions are estimated using the natural gas throughput in MMSCF/month and the emission factor 0.6 lb SO₂/MMSCF from AP 42 Table 1.4-2. In lieu of calculating actual emissions, the permittee may use the potential emissions of 3.38 tons/year (0.28 tons/month).

Equation 3:

$$SO_{2\ total} = SO_{2-EQ1} + SO_{2-EQ2}$$

Where:

$$SO_{2\ total} = \text{total plant wide emissions of SO}_2 \text{ from all sources}$$

The permittee shall record a monthly and 12 month rolling sum of $SO_{2-total}$ as shown in the following table. For the first twelve months after issuance of this permit, the permittee shall conduct this calculation twice per month, as detailed in Table 1. After this initial twelve month period, the testing schedule is dependent upon the 12 month rolling total emissions, as outlined in Table 1.

Attachment Actual SO₂ Emissions

Calculation of 12 month rolling total for month/year: _____

Sampling dates	<i>SO₂ total</i>
First sample of this month, Equation 3:	
Second sample of this month, Equation 3:	
[A] Sum of the items above for the current month:	
Calculation of Rolling 12 month sum	
(1) Total Emissions for this month [A]:	
(2) Previous consecutive 11 month emissions total from previous month's worksheets:	
(3) Current consecutive 12 month sum [(1) + (2)]	

*SSM emissions are required to be reported to the Air Pollution Control Program's Compliance/Enforcement Section according to the provisions of 10 CSR 10-6.050. However, worst case SO₂ emissions occur when flares are operational 100% of the time. SSM of the flares is anticipated to decrease SO₂ emissions. As a conservative SO₂ emissions estimation method, there is no separate line item to account for SSM flare emissions.

Compliance with the Emission Limitation of Special Condition 2 is demonstrated when the current rolling 12 month sum (4) is less than 100.0 tons.

SUBJECT: Ambient Air Quality Impact Analysis (AAQIA) for Bridgeton Landfill, LLC

FACILITY I.D.: 189-0312

PROJECT: Project #2016-06-066

I. Introduction

On June 27, 2016, the Department's Air Pollution Control Program received a construction permit application from Bridgeton Landfill, LLC requesting a facility-wide sulfur dioxide (SO₂) emissions limit of 99 tons per year at its facility located on St. Charles Rock Road in St. Louis County, Missouri. Initial compliance with the 99 ton per year limit will be achieved through the temporary installation of a thermal oxidizer and a caustic scrubber to control the landfill gas emissions. The thermal oxidizer and the caustic scrubber will replace the existing candlestick flares and will remain in operation until the inlet loading of total reduced sulfur (TRS) compounds, at the gas collection and control system, results in SO₂ emissions that are less than 99 tons per year upon combustion by the existing flares. In the interim, the existing flares will remain in place and will be a backup control device in the event that the thermal oxidizer and/or the caustic scrubber are offline. Once it has been demonstrated that the SO₂ emissions are below the emissions limit without the use of the thermal oxidizer and the caustic scrubber, the thermal oxidizer and the caustic scrubber will be removed and the candlestick flares will once again become the primary control device for the landfill gas.

Staff from the Department's Air Pollution Control Program conducted an air quality analysis in order to ensure that compliance with the air quality standards will be maintained after the removal of the thermal oxidizer and the caustic scrubber. The following paragraphs describe the scope of the project and the methodology used throughout the modeling study to show attainment of all applicable standards. The project emissions for all other pollutants are below the *de minimis* emissions thresholds.

Recycled paper

Exhibit B

II. Facility Description

Bridgeton Landfill, LLC is an inactive municipal solid waste landfill located to the east of the Missouri River at 13570 St. Charles Rock Road in Bridgeton, Missouri. The landfill has a design capacity of approximately 17,000,000 cubic yards and has not accepted waste since 2005. In addition to the gas collection and control system, the facility operates a leachate pretreatment plant that is controlled by two natural gas fired thermal oxidizers.

Landfill gas is produced through the decomposition of organic matter and is collected from landfills through the installation of a series of underground wells. The underground well system directs the collected gas to a central point where it is processed for use or flared. Landfill flares are installed in order to control spikes during gas extraction and help to reduce down time due to maintenance.

As noted in the introduction, Bridgeton Landfill, LLC is requesting a facility-wide SO₂ emissions limit of 99 tons per year. Initial compliance with the 99 ton per year limit will be achieved through the temporary installation of a thermal oxidizer and a caustic scrubber to control the landfill gas emissions. Over time, it is anticipated that the amount of SO₂ will decrease and once it has been demonstrated that the SO₂ emissions are below the emissions limit without the use of the thermal oxidizer and the caustic scrubber, the thermal oxidizer and the caustic scrubber will be removed and the candlestick flares will once again become the primary control device for the landfill gas.

The use of the thermal oxidizer and the caustic scrubber were not evaluated as part of this project. The use of the flares as the primary control device was the only operating condition that was compared to the air quality standards.

III. Model Selection

The modeling procedures utilized in this study follow current air quality modeling guidelines as contained within 40 CFR Part 51 Appendix W. AERMOD Version 15181 was used to evaluate compliance with the 1-hour, 3-hour, 24-hour and annual air quality standards based upon the SO₂ emissions that result from the operations at Bridgeton Landfill, LLC.

The AERMOD system was developed through a collaborative effort between the American Meteorological Society and the United States Environmental Protection Agency. AERMOD is a steady-state plume model that employs Gaussian and bi-Gaussian probability density functions to characterize the structure of the planetary boundary layer. AERMOD can predict the concentration distribution of pollutants from surface and elevated releases located within simple or complex terrain. The model allows for the input of multiple sources, terrain elevations, structure effects, various grid receptors, wet and dry depletion calculations, urban or rural terrain, and averaging periods ranging from one hour to one year.

IV. Source Data

SO₂ emissions will be emitted in significant amounts from the operation of the candlestick flares. Because flares are a unique type of point source release, the user is required to adjust the model inputs for the temperature, exit velocity, height and diameter to account for the buoyancy of the plume. The following inputs, based upon the heat release of the flare, should be calculated and input into the air quality model:

- **Effective Stack Exit Velocity** = 20 Meters Per Second
- **Effective Stack Temperature** = 1,273 Degrees Kelvin
- **Adjusted Stack Diameter** = $D = 9.88 \times 10^{-4} \times (q_n)^{1/2}$
 - Net Heat Release from the Flare = $q_n = (0.45) \times q$
 - q = Gross Heat Release from the Flare in Calories Per Second
 - 0.45 = Percentage of Total Heat Released as Sensible Heat
- **Adjusted Stack Height** = $H_{eff} = H_s + 4.56 \times 10^{-3} \times q^{0.478}$
 - H_s = Flare Height
 - q = Gross Heat Release from the Flare in Calories Per Second

Table 1, entitled “Bridgeton Landfill, LLC-Point Source Emission Rates and Stack Parameters” outlines the point source emission rates and their associated stack parameters based upon information provided by the facility and the permit engineer reviewing the project. It is important to note that the default value for the percentage of total heat released was selected for this project. In addition, two differing scenarios were evaluated for compliance purposes based upon the worst case flare scenario and the flow rate of each flare.

Bridgeton Landfill, LLC collects landfill gas data at two locations: the north quarry and the south quarry. Because the amount of landfill gas from the north quarry is substantially less than the south quarry, all emissions calculations were based upon the data that was collected at the south quarry. The landfill currently utilizes four candle stick flares to control the landfill gas emissions that are released through the gas collection system. Based upon the permit engineer’s calculations, the worst case emissions will occur when one or two of the four flares are in operation at any given time. At the maximum flow rate, it is the permit engineer’s opinion that the landfill would be physically unable to operate more than two flares, let alone, all four flares at once; as such, the air quality analysis that was conducted only included an evaluation of two of the four flares.

Under the first scenario, two flares are in operation with 50% of the landfill emissions going to each flare with a flow rate of 3,025 dry standard cubic feet per minute and a net heating value of 164.4 British Thermal Units (BTU) per cubic feet for the 1-hour, 3-hour and 24-hour averaging periods. For the annual averaging period, the calculations were based upon 95% of the total and assumed a flow rate of 2,325.2 dry standard cubic feet per minute and a heating value of 149.9 BTU per cubic feet. This flow rate results in a total heat release of 29.8386 million BTU’s per hour for the short term and 20.9128 million BTU’s per hour for the annual averaging period.

The second scenario assumed that one flare would operate with 100% of the emissions routed to that flare. Because the flow rate and heating value remained unchanged, the total heat released remained at 29.8386 million BTU’s per hour for the short term and 20.9128 million BTU’s per hour for the annual averaging period.

Variable Emission Rates/Modeled Emission Limits

In addition to allowing the user to define sources as point, area, or volume sources, the AERMOD model will also accept variable emission rate factors. For example, the user may want to specify that emissions

from a haul road only occur for eight hours during a twenty-four hour period. This can be accomplished using the hour of day statement in the model input file.

Bridgeton Landfill, LLC did not propose any hourly emission limitations through the use of the hour of day statement within the AERMOD input script.

Release Locations

Bridgeton Landfill, LLC is located to the east of the Missouri River at 13570 St. Charles Rock Road in Bridgeton, Missouri. The locations of the existing candlestick flares are displayed in Figure 1, entitled "Bridgeton Landfill, LLC Source Locations." All of the landfill gas emissions for Scenario #1 and Scenario #2 were assumed to be emitted from F100 and F120.

It should be noted that an asphalt plant is located within the property boundary of Bridgeton Landfill, LLC, refer to Figure 1. Concentration estimates must be calculated within and along the asphalt plant boundary because it operates independently from Bridgeton Landfill, LLC and, as such; the air within its borders is considered ambient. In order to account for this, receptors were placed along and within the boundary of this facility as described in Section V below.

V. Receptors

A Cartesian grid with variable spacing was implemented in order to determine the area of maximum impact from Bridgeton Landfill, LLC. Along the property boundary, receptors were placed at 50-meter intervals, while the remainder of the grid consisted of variable grid spacing from 100- to 1000-meters.

In addition, as noted above, receptors were placed at 50-meter intervals along the boundary of the asphalt plant that is located on Bridgeton Landfill, LLC's property. The area within the asphalt plant boundary was considered ambient and included receptor placement within its center at distances less than 50-meters.

Lastly, an evaluation of the grid revealed that it was not sufficient to determine the furthest extent of the 1-hour significant impact area for Bridgeton Landfill, LLC; as such, the grid was expanded until the full extent could be determined as displayed in Figure 2, entitled "Bridgeton Landfill, LLC Significant Impact and NAAQS Receptor Grid." Because a 1-hour standard does not exist for increment, a smaller grid was used to evaluate compliance and was based upon the 3-hour, 24-hour and annual significant impact areas, refer to Figure 3, entitled "Bridgeton Landfill, LLC Increment Receptor Grid."

In addition to assigning locations, the receptor options within the AERMOD system allow the user to input information regarding the terrain surrounding the facility. AERMOD is capable of calculating air pollutant concentrations in terrain that can be classified as simple, flat, complex, or mountainous land. In order to calculate concentrations in complex or mountainous terrain situations, AERMOD must have information about the surrounding terrain and its features. To aid in the definition of the terrain features, EPA developed a pre-processor, AERMAP, to search terrain data for base elevations and features that may influence the dispersion of pollutants within the modeling domain. Outstanding features are assigned an elevation that is referred to as the hill height scale; a value that must be included in the AERMOD input file.

As recommended by the EPA, the elevations for the receptors within the modeling domain for Bridgeton Landfill, LLC were obtained using the terrain processor, AERMAP. All of the elevations were based upon data contained in 7.5-minute topographic maps obtained from the United States Geological Survey. A visual review of the region indicates that the facility is located in an urban area that is predominately comprised of urban land use characteristics such as residential areas, major roadways, minor roadways,

commercial areas and industrial zones. The Missouri River is evident to the north and west of the landfill where lower elevations associated with the flood plain can be seen. Lambert International Airport is also nearby and is located to the east southeast of Bridgeton Landfill, LLC; please reference Figure 4, entitled "Bridgeton Landfill, LLC Terrain Features." Overall, elevations range from 192 meters to 315 meters.

VI. Meteorological Data

Because AERMOD does not accept raw meteorological data, it must be processed through AERMET, the meteorological data pre-processor for the AERMOD modeling system. AERMET extracts and processes meteorological data in order to calculate the boundary layer parameters that are ultimately necessary for the calculation of pollutant concentrations within the atmosphere.

To accurately calculate the boundary layer parameters, the user must input three characteristics that describe the surface surrounding the meteorological site, the surface roughness, albedo and Bowen ratio. Because these surface characteristics can influence the similarity profiles that are utilized by the dispersion model, AERMOD, the user must determine if the surface characteristics at the meteorological site are similar to those at the facility site. A direct comparison between the surface characteristics at the meteorological site and those at the surface site is necessary to determine if the differences that result will significantly impact the overall pollutant concentrations.

In order to provide a consistent method for determining surface characteristics, the EPA developed a mathematical tool, AERSURFACE, to determine surface roughness, Bowen ratio, and albedo values for input into AERMET.

AERSURFACE employs land cover data from the United States Geological Survey 1992 National Land Cover data archives. Each of the 21 land use categories contained within the land cover database are linked to a set of seasonal surface characteristics as defined in Tables A-1, A-2, A-3 and 2-2 of the AERSURFACE User's Guide. The seasonal categories represent the same categories employed by the AERMOD system for its gas deposition algorithms.

As noted in the AERSURFACE User's Guide, EPA's recommendations for determining surface characteristics in Section 3.1 of the AERMOD Implementation Guide dated, January 9, 2008, have been incorporated into the AERSURFACE tool. The Department's Air Pollution Control Program agrees with the recommendations and executed AERSURFACE using the default values described below:

- Bowen ratio
 - Ten kilometer by ten kilometer domain centered on the site.
- Albedo
 - Ten kilometer by ten kilometer domain centered on the site.
- Surface roughness length
 - Default upwind distance of one kilometer centered on the site.
 - Twelve, 30 degree meteorological sectors.

Other considerations made in the execution of the AERSURFACE tool include the site type (is the site an airport?), site climatology (arid or not?) and surface moisture (dry, average, wet). Because the surface moisture can vary based upon the meteorological period, AERSURFACE was executed for each moisture condition. The Bowen ratio characteristics applied in Stage 3 AERMET processing were determined based upon the precipitation totals from the meteorological record for the time period being processed. For example, if the meteorological period reported above average precipitation totals, the Bowen ratio values for wet surface moisture were chosen.

For this project, the surface characteristics surrounding multiple airports across the state were compared to the surface characteristics surrounding the facility site in Bridgeton, Missouri. Based upon this analysis, the Lambert International Airport was chosen for use. Table 2, entitled "Bridgeton Landfill, LLC Vs. Lambert International Airport Surface Characteristics" compares the land use within the region surrounding the meteorological measurement site and the application site.

The one-kilometer land use surrounding Bridgeton Landfill, LLC is comprised primarily of herbaceous planted/cultivated and developed land use characteristics. Lesser amounts of barren areas, forested upland and water land use categories are also evident. In comparison, Lambert International Airport is comprised primarily of developed and herbaceous planted/cultivated land use characteristics with lesser amounts of forested uplands. Although some differences are evident based upon the land use analysis, the Lambert International Airport is the most similar airport within 200-kilometers of the source and is less than six kilometers from the facility site.

Figures 5 and 6, entitled "Bridgeton Landfill, LLC, Meteorological Domain" and "Lambert International Airport, Meteorological Domain" graphically display the meteorological domains used in the airport comparison that was conducted by staff of the department's Air Pollution Control Program.

The meteorological data spans the period from 2010-2014 and includes 1-minute ASOS wind data. The 1-minute ASOS data was obtained from the National Climatic Data Center in the TD-6405 data format that includes the 2-minute average wind speed and direction for each minute within an hour. The use of the 1-minute ASOS data more accurately depicts the average hourly wind flow than the single instantaneous reading of wind speed and direction that is currently used in air quality modeling analyses. There are several advantages to supplementing the ISHD data with TD-6405 data.

One advantage of supplementing the ISHD data with TD-6405 data is the increased frequency of measurements resulting in increased potential for non-calm or non-missing data. The instantaneous reading included in the ISHD data file represents the 2-minute average wind speed and direction at a specified time, typically ten minutes before the hour. If the measured value is missing or variable, the data for that hour is reported as a calm, or missing. On the other hand, when using TD-6405 as a supplement, the wind speed and direction values are based upon the hourly average of all of the two-minute averages that are collected within that hour at the ASOS station. If the hour has at least two usable non-calm observations during the first half hour or at least one usable non-calm observation in the last half hour, the direction and speed will have a value. Using each minute instead of a specific time, the TD-6405 data increases the likelihood that the hour will have a valid value.

Another advantage of supplementing the ISHD data with TD-6405 data is that the wind speed threshold of the anemometer increases. Where the ISHD data by itself will report any wind speed below three knots as calm; ISHD data supplemented with TD-6405 data, the wind speed threshold is less than or equal to two knots. If the ASOS station is a member of the Ice Free Winds Group, the wind speed threshold is effectively zero.

Lastly, the ISHD data file reports wind direction to the nearest ten degrees. In order to obtain a wind direction based upon the nearest degree, the EPA developed a procedure to "randomize" the reported wind direction using a single-digit random number for each hour of the year. In order to obtain a wind direction based upon the nearest degree, the sum of the wind direction and the random number are subtracted by four. The process of randomizing the wind direction is not necessary when utilizing the 1-minute ASOS data because the wind direction is reported to the nearest degree rather than the nearest ten degrees.

AERMET produced two files for input for each of the five years of meteorological data. The first

file contains the boundary layer scaling parameters (surface friction velocity, mixing heights, and Monin-Obukhov length), reference height winds and temperature. The second file contains a vertical profile of winds, temperature, and the standard deviation of the fluctuating components of the wind.

It is important to note that the vertical profile of winds, temperature, and the standard deviation of the fluctuating components of the wind is limited to the number of levels for which meteorological parameters are measured. The profile file is intended for applications for which on-site meteorological data has been collected. For applications that use National Weather Service measurements, the information in the profile file is identical to the information contained within the surface file. AERMOD will use all of the data included in the profile file to construct vertical profiles of wind speed, direction, temperature, and turbulence (both sigma-theta and sigma-w). In the absence of profile data (i.e. NWS data only), AERMOD will construct vertical profiles of wind, temperature and turbulence based on similarity theory relationships, using the reference wind and temperature observations as one level of the profile. For multi-level on-site meteorological data, the profiles created by AERMOD are forced to follow the observed values at each measurement height. The "theoretical" profiles based on similarity theory are used to extrapolate above and below the range of measurements and to interpolate between measurement levels, preserving the shape of the theoretical profiles. The procedure of constructing these vertical profiles in AERMOD has been referred to as the "AERMOD Meteorological Interface", and is described in Sections 4 and 7.10 of the AERMOD formulation document (EPA-454/R-03-004).

VII. Building Downwash

Building downwash was not calculated for this project due to the nature of how the emissions are released from the flare. Unlike most emission sources, actual stack parameters are not used when modeling flares. Adjusted stack heights are used in the modeling which makes it difficult to use BPIP because it requires stack heights to determine when building downwash is occurring. Since flares were the only emission type being modeled, a BPIP analysis was not conducted.

VIII. Good Engineering Practice Stack Height

The Clean Air Act states that a stack should be high enough to ensure that its emissions do not result in excessive ground level pollutant concentrations in the area surrounding the stack due to downwash effects caused by the source itself, nearby structures, or complex terrain. It also states that the stack shall not exceed two and one-half times the height of the obstructing source unless a demonstration can be made that this is necessary. According to 40 CFR 51.1(ii), good engineering practice (GEP) stack height is the greater of 65 meters (measured from base of the stack) or the height of the nearby structure (measured from base of stack) plus 1.5 times the lesser dimension of the nearby structure. If neither of the above approaches are used to determine GEP stack height, a fluid model study can be conducted.

None of the stacks contained within the model input file exceeds 65 meters and as such all of the proposed stacks met GEP stack height requirements.

IX. Significance Determination

As stated previously, a facility that proposes to emit any pollutant above the thresholds outlined in 10 CSR 10-6.060 (3) (A) Table 1 must submit an ambient air quality impact analysis to the permit granting authority. In order to determine if a full impact model analysis and/or ambient air monitoring is necessary, a facility must complete a preliminary model analysis. This analysis should only include the proposed source(s) or modification(s) so it can be determined if a significant modeled impact will take place. If the model predicts the high first high to be below the thresholds outlined in 10 CSR 10-6.060

(11)(D) Table 4, no further analysis is necessary and the modeling study can be deemed complete provided it follows the EPA's minimum modeling requirements.

The following paragraphs describe the results obtained from the verification analysis conducted by the Department's Air Pollution Control Program on a pollutant by pollutant basis.

SO₂

Table 3, entitled "Bridgeton Landfill, LLC-SO₂ Significant Impact Determination," summarizes the maximum SO₂ concentrations as predicted by the AERMOD dispersion model for Scenario 1 (2 Flares in Operation, Emissions Equally Divided Between the Two) and Scenario 2 (1 Flare in Operation, 100% of the Emissions). In order to determine if the proposed project will have a significant impact on a 1-hour basis, the interim significant impact level, 7.85 µg/m³, should be compared to the highest of the five year averages of the maximum modeled 1-hour SO₂ concentrations predicted for each year at each receptor. Based upon this methodology, the worst case 1-hour impact occurred under Scenario 1 with a five year average of 89.91 µg/m³.

Unlike the 1-hour averaging period, the maximum predicted concentration for the 3-hour, 24-hour and annual standards are compared to the significant impact levels. The maximum 3-hour impacts occurred during the 2012 meteorological data period under Scenario 2 with a predicted concentration of 89.61 µg/m³. The maximum 24-hour impacts occurred during the 2010 meteorological data period under Scenario 2 with a predicted concentration of 40.90 µg/m³. The maximum annual impact occurred during the 2012 meteorological period under Scenario 2 with a predicted concentration of 3.58 µg/m³.

The 1-hour, 3-hour, 24-hour and annual averaging periods exceed the significance levels of 7.85 µg/m³, 25 µg/m³, 5 µg/m³ and 1 µg/m³, thereby, triggering a full impact analysis for this pollutant.

The extent of the 1-hour, 3-hour, 24-hour and annual significant impact areas are graphically displayed in Figures 7, 8, 9, 10, 11, 12, 13 and 14, entitled "Bridgeton Landfill, LLC-Scenario 1-Significant Impact Determination-1-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC - Scenario 1-Significant Impact Determination-3-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC - Scenario 1-Significant Impact Determination-24-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC - Scenario 1-Significant Impact Determination-Annual Averaging Period-SO₂," "Bridgeton Landfill, LLC-Scenario 2-Significant Impact Determination-1-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC - Scenario 2-Significant Impact Determination-3-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC - Scenario 2-Significant Impact Determination-24-Hour Averaging Period-SO₂" and "Bridgeton Landfill, LLC - Scenario 2-Significant Impact Determination-Annual Averaging Period-SO₂,"

The furthest extent of the 1-hour significant impact area is approximately 87 kilometers from the facility center. For the 3-hour and 24-hour averaging periods the significant impact area extended approximately 11 and 10 kilometers from the facility center, respectively. Lastly, the furthest extent of the annual significant impact area is less than two kilometers from the facility center. None of the areas extended beyond the expanded edge of the receptor grid described in Section V.

X. NAAQS Results

A NAAQS compliance demonstration is required for all pollutants that exceed the significance levels outlined in 10 CSR 6.060 (11) (D) Table 4. As stated previously, the significance levels for SO₂ were exceeded; as such, a full impact analysis that includes an evaluation of compliance with the NAAQS was triggered.

Unlike a significance determination, a NAAQS compliance demonstration must consider emissions from the proposed source, existing “interactive” sources and a monitored background concentration. The modeled emission rates must reflect the maximum allowable operating conditions based upon federally enforceable emission limits and operating levels, for each pollutant, and averaging time. The following paragraphs describe the results obtained from the verification analysis conducted by the Department’s Air Pollution Control Program on a pollutant by pollutant basis.

SO₂

In order to complete the full impact analysis, a NAAQS inventory of all SO₂ emitting facilities that could potentially have an effect within the significant impact area of the new source was developed and input into the compliance demonstration. The Guideline on Air Quality Models suggests that all nearby sources be included in this inventory. Figure 15, entitled “Bridgeton Landfill, LLC-SO₂ NAAQS Sources” contains a graphical display of the locations of the interactive sources as contained within the AAQIA.

For the monitored portion of the background concentration, the Margareta monitor site was selected, refer to Figure 16, entitled “Bridgeton Landfill, LLC-Background Monitor Site Locations-SO₂.” This site is approximately 21-kilometers from the facility center and is in an area that is influenced by similar emission categories that include mobile, commercial and industrial sources. It is important to note that data screening was not conducted; the entirety of the data period was considered in the determination of the monitored background value. Additionally, sources whose impact was likely captured at the monitor site continued to be explicitly modeled and may have resulted in conservative model estimates due to the potential for double counting. The background values included in the NAAQS results are as follows based upon averaging time:

- 1-Hour
 - 3-year average of the 99th percentile of the annual distribution of the daily maximum 1-hour concentrations
 - 68.01 µg/m³
- 3-Hour
 - Maximum 3-hour impact over the most recent three year period
 - 113.52 µg/m³
- 24-Hour-
 - Maximum 24-hour impact over the most recent three year period
 - 26.94 µg/m³
- Annual
 - Maximum annual impact over the most recent three year period
 - 4.71 µg/m³

As noted above, this data should provide a conservative estimate of the concentrations that would be realized if ambient monitoring was conducted near the facility site since both locations are in multi-source areas with influences from mobile, industrial and commercial source categories.

To show compliance with the 1-hour NAAQS for SO₂ the facility must demonstrate that the five-year average of the 99th percentile of the annual distribution of daily maximum 1-hour average concentrations is less than 196.2 µg/m³. Based upon the form of the new 1-hour standard, the modeled design value is the five year average of the fourth highest, daily maximum, 1-hour concentrations. On a 3-hour and 24-hour basis, the facility must demonstrate that the maximum, second highest concentration is less than 1300 µg/m³ and 365 µg/m³. Finally, on an annual basis, the facility must demonstrate that the maximum annual concentration is less than 80 µg/m³.

The results from the Department's Air Pollution Control Program verification run were used to evaluate compliance with the SO₂ standards and are contained in Table 4, entitled "Bridgeton Landfill, LLC-NAAQS Compliance Determination-SO₂." No violations of the 24-hour SO₂ standard were predicted with a second high concentration of 311.013 µg/m³. On a 3-hour and an annual basis one receptor violated the NAAQS with a second high 3-hour concentration of 1,317.896 µg/m³ and a maximum annual concentration of 180.262 µg/m³. Additionally, on a 1-hour basis, several violations of the 1-hour standard occurred with a design value of 2034.940 µg/m³.

According to EPA guidance, Bridgeton Landfill, LLC must demonstrate that they do not have a significant impact at any violating receptor regardless of where it is located. If it can be demonstrated that the facility has insignificant impacts at violating receptors (at the time of the predicted violation), approval of the SO₂ analysis can be provided.

For the 3-hour and annual SO₂ standard, the maximum impact due to the proposed construction at the Bridgeton Landfill, LLC facility was compared to each receptor in violation of the NAAQS standard. Based upon this comparison, refer to Table 5; entitled "Bridgeton Landfill, LLC-3-Hour and Annual SO₂ NAAQS Violations vs. Maximum Impact from Bridgeton Landfill, LLC," the facility did not have a significant impact on a violation. Since a significant impact did not take place, no further evaluation is necessary for these two averaging periods.

Unlike the 3-hour and the annual averaging periods, the determination of significant impact for the 1-hour averaging period must consider the source's impact for each instance where the cumulative impact exceeds the NAAQS at or below the 99th percentile. Because this analysis can become complicated, the Environmental Protection Agency developed an output option in the AERMOD system that compares the contribution from the proposed project to the cumulative impact at each receptor paired in time and space, MAXDCONT. For the 1-hour violations, the MAXDCONT option within the AERMOD modeling system was used to determine the contribution that Bridgeton Landfill, LLC had on each violation paired in time and space. Table 6, entitled "Bridgeton Landfill, LLC-SO₂ NAAQS Impacts Paired in Time and Space" summarizes this impact and demonstrates that on a 1-hour basis, the landfill had less than significant impacts; as such, no further evaluation is necessary.

The SO₂ output generated from the AERMOD dispersion model is graphically displayed in Figure's 17, 18, 19, 20, 21, 22, 23 and 24, entitled "Bridgeton Landfill, LLC-Scenario 1-NAAQS Compliance- 1-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC-Scenario 1-NAAQS Compliance- 3-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC-Scenario 1-NAAQS Compliance- 24-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC-Scenario 1-NAAQS

Compliance- Annual Averaging Period-SO₂,” “Bridgeton Landfill, LLC-Scenario 2-NAAQS Compliance- 1-Hour Averaging Period-SO₂,” “Bridgeton Landfill, LLC-Scenario 2-NAAQS Compliance- 3-Hour Averaging Period-SO₂,” “Bridgeton Landfill, LLC-Scenario 2-NAAQS Compliance- 24-Hour Averaging Period-SO₂” and “Bridgeton Landfill, LLC-Scenario 2-NAAQS Compliance- Annual Averaging Period-SO₂.”

Several areas with elevated SO₂ concentrations were noted within the receptor grid. The maximum impacts are the result of emissions from power generating facilities, asphalt plants and other industrial boilers.

XI. Increment Consumption

In addition to demonstrating compliance with the NAAQS for SO₂, Bridgeton Landfill, LLC must demonstrate that they will not deteriorate the air quality beyond the limits outlined in 10 CSR 10-6-060 (11)(A) Table 1. Current data indicates that the SO₂ minor source baseline date was triggered for the entire southwestern air quality control region in 1977. As such, the inventory included all sources that received a permit after the 1977 baseline date was created. The following paragraphs describe the results obtained from the verification analysis conducted by the Air Pollution Control Program on a pollutant by pollutant basis.

SO₂

In order to complete the full impact analysis, an increment inventory of all SO₂ emitting facilities that could potentially have an effect within the significant impact area of the new source was developed and input into the compliance demonstration. The Guideline on Air Quality Models suggests that all nearby sources be included in this inventory. Figure 25, entitled “Bridgeton Landfill, LLC-SO₂ Increment Sources” contains a graphical display of the locations of the interactive sources as contained within the AAQIA.

To show compliance with the increment for SO₂, the facility must demonstrate that its impact will be below 512 µg/m³ on a 3-hour basis, 91 µg/m³ on a 24-hour basis and 20 µg/m³ on an annual basis. The results from the Department’s Air Pollution Control Program verification run were used to evaluate compliance with the SO₂ standards and are contained in Table 7, entitled “Bridgeton Landfill, LLC-Increment Compliance Determination-SO₂.” The results obtained from the air quality model indicate that violations of the SO₂ standard occur for all three averaging periods with second high maximums of 54,803.464 µg/m³ and 11,943.829 µg/m³ for the 3-hour and 24-hour averaging periods and a maximum of 1,117.174 µg/m³ for the annual averaging period.

According to EPA guidance, Bridgeton Landfill, LLC must demonstrate that they do not have a significant impact at any violating receptor regardless of where it is located. If it can be demonstrated that the facility has insignificant impacts at violating receptors (at the time of the predicted violation), approval of the SO₂ analysis can be provided.

For the 3-hour, 24-hour and annual SO₂ standards, the maximum impact due to the proposed modification at Bridgeton Landfill, LLC was compared to each receptor in violation of the increment standard. Based upon this comparison, refer to Table 8; entitled “Bridgeton Landfill, LLC-3-Hour, 24-Hour and Annual SO₂ Increment Violations vs. Maximum Impact from Bridgeton Landfill, LLC,” the landfill had a significant impact on one receptor for the 3-hour averaging period and one receptor for the 24-hour averaging period. As such, the compliance demonstration had to go one step further to determine if a significant impact from the facility occurred at the same time a violation was predicted. If insignificant impacts are predicted at the

time of the violation, the model analysis can be approved without further investigation or emission reductions. Table 9, entitled "Bridgeton Landfill, LLC-SO₂ Increment Time of Day Comparison-3-Hour and 24-Hour Averaging Periods" contains the results of the time and space comparison that was conducted by the Department's Air Pollution Control Program. On a 3-hour and 24-hour basis, Bridgeton Landfill, LLC had insignificant impacts on each of the violation days.

The SO₂ output generated from the AERMOD dispersion model is graphically displayed in Figures 26, 27, 28, 29, 30 and 31, entitled "Bridgeton Landfill, LLC-Scenario 1-Increment Compliance-3-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC -Scenario 1-Increment Compliance-24-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC -Scenario 1-Increment Compliance-Annual Averaging Period-SO₂," "Bridgeton Landfill, LLC-Scenario 2-Increment Compliance-3-Hour Averaging Period-SO₂," "Bridgeton Landfill, LLC -Scenario 2-Increment Compliance-24-Hour Averaging Period-SO₂" and "Bridgeton Landfill, LLC -Scenario 2-Increment Compliance-Annual Averaging Period-SO₂."

Several areas with elevated SO₂ concentrations is evident near the Bridgeton Landfill, LLC. The maximum impacts are the result of emissions from a steel processing plant, industrial boilers and asphalt heaters.

XI. Recommendations

The AAQIA submitted in support of Bridgeton Landfill, LLC's construction permit application is complete. The following recommendations should be incorporated into the construction permit as special conditions. Failure to do so may invalidate the results obtained from the AAQIA.

1. The point source emission rates contained in Table 1, "Bridgeton Landfill, LLC - Point Source Emission Rates and Stack Parameters" should not be exceeded. In the event that the emission rates are exceeded, further review will be required by staff which may result in future modeling.

MISSOURI
DEPARTMENT OF
NATURAL RESOURCES

MISSOURI AIR CONSERVATION COMMISSION

PERMIT TO CONSTRUCT

Under the authority of RSMo 643 and the Federal Clean Air Act the applicant is authorized to construct the air contaminant source(s) described below, in accordance with the laws, rules and conditions as set forth herein.

Permit Number: **042018-005** Project Number: 2016-06-066
Installation Number: 189-0312

Parent Company: Bridgeton Landfill, LLC

Parent Company Address: 13570 St. Charles Rock Road, Bridgeton, MO 63044

Installation Name: Bridgeton Landfill, LLC

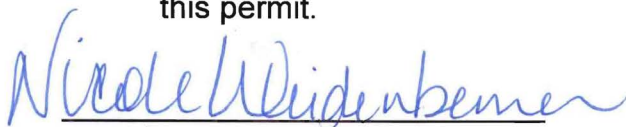

Installation Address: 13570 St. Charles Rock Road, Bridgeton, MO 63044

Location Information: St. Louis County

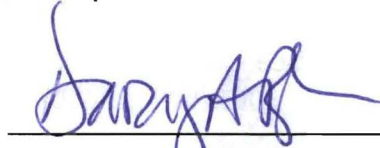

Application for Authority to Construct was made for:
Operation of four flares to control landfill gas emissions. This review was conducted in accordance with Section (6), Missouri State Rule 10 CSR 10-6.060, *Construction Permits Required*.

Standard Conditions (on reverse) are applicable to this permit.

Standard Conditions (on reverse) and Special Conditions are applicable to this permit.

RE: New Source Review Permit - Project Number: 2016-06-066

Dear Ms. Fanning:

Enclosed with this letter is your permit to construct. Please study it carefully and refer to Appendix A for a list of common abbreviations and acronyms used in the permit. Also, note the special conditions, on the accompanying pages. The document entitled, "Review of Application for Authority to Construct," is part of the permit and should be kept with this permit in your files. Operation in accordance with these conditions, your new source review permit application and with your operating permit is necessary for continued compliance. The reverse side of your permit certificate has important information concerning standard permit conditions and your rights and obligations under the laws and regulations of the State of Missouri.

This permit may include requirements with which you may not be familiar. If you would like the department to meet with you to discuss how to understand and satisfy the requirements contained in this permit, an appointment referred to as a Compliance Assistance Visit (CAV) can be set up with you. To request a CAV, please contact your local regional office or fill out an online request. The regional office contact information can be found at the following website: <http://dnr.mo.gov/regions/>. The online CAV request can be found at <http://dnr.mo.gov/cav/compliance.htm>.

If you were adversely affected by this permit decision, you may be entitled to pursue an appeal before the administrative hearing commission pursuant to Sections 621.250 and 643.075.6 RSMo. To appeal, you must file a petition with the administrative hearing commission within thirty days after the date this decision was mailed or the date it was delivered, whichever date was earlier. If any such petition is sent by registered mail or certified mail, it will be deemed filed on the date it is mailed; if it is sent by any method other than registered mail or certified mail, it will be deemed filed on the date it is received by the administrative hearing commission, whose contact information is: Administrative Hearing Commission, United States Post Office Building, 131 West High Street, Third Floor, P.O. Box 1557, Jefferson City, Missouri 65102, phone: 573-751-2422, fax: 573-751-5018, website: www.oa.mo.gov/ahc.

Exhibit B

Ms. Erin Fanning
Page Two

If you have any questions regarding this permit, please do not hesitate to contact Nicole Weidenbenner, P.E., at the Department of Natural Resources' Air Pollution Control Program, P.O. Box 176, Jefferson City, MO 65102 or at (573) 751-4817. Thank you for your attention to this matter.

Sincerely,

AIR POLLUTION CONTROL PROGRAM

Kendall B. Hale
Permits Section Chief

Enclosures

c: St. Louis Regional Office
PAMS File: 2016-06-066

Permit Number: **042018-005**

Exhibit B

STANDARD CONDITIONS:

Permission to construct may be revoked if you fail to begin construction or modification within two years from the effective date of this permit. Permittee should notify the Enforcement and Compliance Section of the Air Pollution Control Program if construction or modification is not started within two years after the effective date of this permit, or if construction or modification is suspended for one year or more.

You will be in violation of 10 CSR 10-6.060 if you fail to adhere to the specifications and conditions listed in your application, this permit and the project review. In the event that there is a discrepancy between the permit application and this permit, the conditions of this permit shall take precedence. Specifically, all air contaminant control devices shall be operated and maintained as specified in the application, associated plans and specifications.

A copy of the permit application and this permit and permit review shall be kept at the installation address and shall be made available to Department's personnel upon request.

You may appeal this permit or any of the listed special conditions to the Administrative Hearing Commission (AHC), P.O. Box 1557, Jefferson City, MO 65102, as provided in RSMo 643.075.6 and 621.250.3. If you choose to appeal, you must file a petition with the AHC within 30 days after the date this decision was mailed or the date it was delivered, whichever date was earlier. If any such petition is sent by registered mail or certified mail, it will be deemed filed on the date it is mailed. If it is sent by any method other than registered mail or certified mail, it will be deemed filed on the date it is received by the AHC.

If you choose not to appeal, this certificate, the project review and your application and associated correspondence constitutes your permit to construct. The permit allows you to construct and operate your air contaminant source(s), but in no way relieves you of your obligation to comply with all applicable provisions of the Missouri Air Conservation Law, regulations of the Missouri Department of Natural Resources and other applicable federal, state and local laws and ordinances.

The Air Pollution Control Program invites your questions regarding this air pollution permit. Please contact the Construction Permit Unit using the contact information below.

Contact Information:
Missouri Department of Natural Resources
Air Pollution Control Program

The regional office information can be found at the following website:
<http://dnr.mo.gov/regions/>

SPECIAL CONDITIONS:

The permittee is authorized to construct and operate subject to the following special conditions:

The special conditions listed in this permit were included based on the authority granted the Missouri Air Pollution Control Program by the Missouri Air Conservation Law (specifically 643.075) and by the Missouri Rules listed in Title 10, Division 10 of the Code of State Regulations (specifically 10 CSR 10-6.060). For specific details regarding conditions, see 10 CSR 10-6.060 paragraph (12)(A)10. "Conditions required by permitting authority."

Bridgeton Landfill, LLC ("Permittee")
St. Louis County

1. Superseding Condition

The conditions of this permit supersede all federally and state enforceable special conditions found in all construction permits issued by the St. Louis County Department of Health, Air Pollution Control Program, except for Construction Permits #7864 and 7865 (Missouri Department of Natural Resources, Air Pollution Control Program project #2014-08-002).

2. Plant Wide Emission Limitations

A. The permittee shall emit less than 100.0 tons of sulfur dioxide (SO₂) in any consecutive 12-month period from the entire installation. The entire installation is defined as the equipment and operations presented in Table 2.

3. Operational Limitations

A. The permittee shall combust the landfill gas collected by the gas collection system using flares (EP-011, EP-012, EP-013, and EP-014).

B. The permittee shall maintain an operating and maintenance log for all flares (EP-011, EP-012, EP-013, and EP-014) which shall include the following:

- 1) Dates of all incidents of malfunction, with impact on emissions, duration of event, probable cause, and corrective actions; and
- 2) Dates of all maintenance activities, with inspection schedule, repair actions, and replacements.

C. As long as Bridgeton Landfill is subject to 40 CFR 60 Subpart WWW or 10 CSR 10-5.490, the Bridgton Landfill, LLC shall demonstrate compliance with 40 CFR §60.18 and §60.754 by performing monthly sampling at the flares. The permittee shall keep records of all test results and any corrective actions taken.

D. For units that combust fuel oil, the permittee shall only combust fuel oil with a sulfur content of 15 ppmv or less.

SPECIAL CONDITIONS:

The permittee is authorized to construct and operate subject to the following special conditions:

4. Landfill Gas Flow Monitoring and Landfill Gas Sulfur Content Sampling
 - A. Landfill gas flow rates
 - 1) The permittee shall install and operate flow meters at each flare (EP-011, EP-012, EP-013, and EP-014) and the main blower station to quantify the gas flow rate. Each flow meter shall be measured and recorded separately. Flare flow rates shall be recorded at least every 15 minutes, consistent with 60.756(c)(2)(i).
 - 2) The permittee shall operate and maintain all flow meters used for any compliance demonstrations in accordance with the manufacturer's specifications, which shall be kept on site. All flow meters used for compliance demonstrations must be directly calibrated using EPA Methods on a monthly basis.
 - 3) The permittee shall maintain an operating and maintenance log for all flow meters used for compliance demonstrations which shall include the following:
 - a) Dates of all incidents of malfunction, with impact on emissions, duration of event, probable cause, and corrective actions; and
 - b) Dates of all maintenance activities, with inspection schedule, repair actions, and replacements.
 - B. Landfill gas sulfur content
 - 1) The permittee shall collect landfill gas samples at the main blower station using summa canisters.
 - 2) The permittee shall conduct testing on the landfill gas samples to quantify sulfur compounds using ASTM D5504-12 or an alternative approved by the Air Pollution Control Program's Compliance/Enforcement Section. Testing results shall be in units of ppmv.
 - 3) The permittee shall conduct sampling on the frequency detailed in Table 1. The SO₂ emissions shall be calculated using Attachment Actual SO₂ Emissions, or an equivalent.

SPECIAL CONDITIONS:

The permittee is authorized to construct and operate subject to the following special conditions:

Table 1: LFG sulfur content sampling frequency

SO ₂ Emissions	Sampling shall be performed a minimum of....
For the first six months after the effective date of this permit or until 12 month rolling emissions are less than or equal to 75, whichever is later:	1 st and 15 th of each month.
If 12 month rolling emissions are less than 75 but greater than or equal to 50:	Monthly.
If 12 month rolling emissions are less than 50.	Annually, to be conducted between 11 and 13 months from the previous test.

5. **Leachate Management System Sulfur Emissions**
 Within 60 days after the issuance date of this permit, the permittee shall perform testing to quantify the volatilized sulfur in the leachate tanks. Within 30 days of the testing date, the permittee shall submit all documentation for the testing. This documentation shall include, but is not limited to, the following information. If the testing results indicate the volatilized sulfur is greater than 1.7%, the permittee shall submit an application for a permit amendment.
 - A. Testing date and location;
 - B. Sampling procedures and chain of custody;
 - C. Field data sheets; and
 - D. Sample analysis procedures, calculations, and results.

6. **Record keeping**
 - A. **Plant Wide Sulfur dioxide emissions**
 The permittee shall use Attachment Actual SO₂ Emissions, or equivalent, to determine the monthly SO₂ emissions from the entire installation. This calculation shall be used to determine compliance with the emission limitation in Special Condition #2.
 - B. The permittee shall maintain all records required by this permit for not less than five years and shall make them available immediately to any Missouri Department of Natural Resources' personnel upon request.

7. **Exceedances**
 If the records required by this permit show the permittee exceeds the SO₂ emission limitations established in Special Condition # 2, the permittee shall submit an application to obtain a new construction permit, which is based upon the current level of emissions, within 60 days of the date the emission limit is exceeded.

SPECIAL CONDITIONS:

The permittee is authorized to construct and operate subject to the following special conditions:

8. Reporting Requirements

The permittee shall report to the Air Pollution Control Program's Compliance/Enforcement Section, by mail at P.O. Box 176, Jefferson City, MO 65102 or by email at aircompliancereporting@dnr.mo.gov, no later than 10 days after the end of the month during which any record required by this permit shows an exceedance of any limitation imposed by this permit.

REVIEW OF APPLICATION FOR AUTHORITY TO CONSTRUCT AND OPERATE
SECTION (6) REVIEW

Project Number: 2016-06-066
Installation ID Number: 189-0312
Permit Number: 042018 - 005

Installation Address:
Bridgeton Landfill, LLC
13570 St. Charles Rock Road
Bridgeton, MO 63044

Parent Company:
Bridgeton Landfill, LLC
13570 St. Charles Rock Road
Bridgeton, MO 63044

St. Louis County

REVIEW SUMMARY

- Bridgeton Landfill, LLC has applied for authority to control landfill gas emissions.
- The application was deemed complete on February 9, 2017.
- HAP emissions are expected from the equipment.
- 40 CFR 60 Subpart WWW, "Standards of Performance for Municipal Solid Waste Landfills" applies to the equipment.
- 40 CFR part 61 Subpart M "National Emission Standards for Asbestos" applies to installations that have accepted asbestos containing waste. MACT AAAA, National Emission Standards for Hazardous Air Pollutants: Municipal Solid Waste Landfills applies to the equipment.
- Flares are used to control the emissions from the landfill. Flares reduce VOC, NMOC, CH₄, and HAPs in the landfill gas. Flares will reduce sulfur compounds (including TRS and RSC) to SO₂. Flares are also an emission source of combustion products including, but not limited to PM, PM₁₀, PM_{2.5}, SO₂, NO_x, CO, and CO₂.
- This review was conducted in accordance with Section (6) of Missouri State Rule 10 CSR 10-6.060, Construction Permits Required. Potential emissions of SO₂ are above de minimis levels.
- This installation is located in St. Louis County, a nonattainment area for the 2008 8-hour ozone standard and the 1997 PM_{2.5} standard and an attainment area for all other criteria pollutants.
- This installation is not on the List of Named Installations found in 10 CSR 10-6.020(3)(B), Table 2.
- Ambient air quality modeling was performed to determine the ambient impact of SO₂.

- Emission testing is required as a part of this permit. Testing may be required as part of other state, federal or applicable rules.
- Approval of this permit is recommended with special conditions.

INSTALLATION DESCRIPTION

Bridgeton Landfill, LLC owns and operates an inactive municipal solid waste landfill located at 13570 Saint Charles Rock Road in Bridgeton, Missouri. Bridgeton began landfilling operations in 1952 and has been closed since 2005, with a final capacity of approximately 17,000,000 cubic yards. Current operations at the inactive landfill facility are focused on managing gas and liquids from the landfill. Landfill gas is managed and controlled through the use of a gas collection and control system (GCCS). Additionally, the facility treats leachate onsite at a leachate pretreatment plant (LPTP). LPTP emissions are controlled by two natural gas fired thermal oxidizers, 2.75 MMBtu/hr each, which are permitted under Air Pollution Control Program project 2014-08-008, (St. Louis County permits 7864 and 7865). There are various other emission units onsite, with a complete listing in Table 2 below.

Table 2: Emission points and descriptions

Emission Point	Unit Description
EP-011	Flare #1: 3,500 SCFM John Zink open candlestick flare, installed 2012.
EP-012	Flare #2: 4,000 SCFM John Zink open candlestick flare, installed 2013.
EP-013	Flare #3: 4,000 SCFM John Zink open candlestick flare, installed 2013.
EP-014	Flare LFG CSU: 2,500 SCFM LFG Specialties open candlestick flare, installed 2013.
EP-016a	316,000 gallon leachate treatment tank
EP-017a	4-1 million gallon leachate treatment tanks (Tanks 1 through 4)
EP-018a	LMS RTO #1: 2.75 MMBtu/hr Cycle Therm regenerative thermal oxidizer used to control emissions from Leachate Management System (LMS) pretreatment and aeration tanks.
EP-018b	LMS RTO #2: 2.75 MMBtu/hr Cycle Therm regenerative thermal oxidizer used to control emissions from Leachate Management System (LMS) pretreatment and aeration tanks.
EP-019	1000 kW emergency generator, Caterpillar Model No. SR5, Engine Model C32 TA, 4 stroke, 32.10 Displacement, 12 cylinder. Combusts #2 fuel oil. Located in main flare yard.
EP-020	175 hp emergency generator, Caterpillar Model No. XQ175-2, Engine Model CAT C6.6 ACERT. Combusts #2 fuel oil.
EP-021	543 kW emergency generator, Perkins Model 2506C-E15TAG3. Combusts #2 fuel oil. Located at
EP-I09	Storage tank, #2 fuel oil, 500 gallon capacity
EP-I10	24 leachate frac tanks
EP-I11	LMS treated leachate tank, discharges to MSD, 97,000 gallon capacity

The following New Source Review permits have been issued to Bridgeton Landfill, LLC from the St. Louis County Department of Health, under delegated authority from the Air Pollution Control Program. This project is the first permit issued for the facility from the Air Pollution Control Program.

Project 2014-05-068 County Construction Permit #7839 and #7840 Section (5) Const. Permit Effective June 19, 2014	One 3,500 scfm John Zink ZTOF enclosed flare (decommissioned 2015), and one Caterpillar CAT C6.6 ACERT diesel emergency use engine.

Table 3: Permitting history, continued

Permit #	Description
Project 2014-08-002 County Construction Permit #7864 and #7865 Section (5) Const. permit Effective August 25, 2014	LMS RTO #1 and #2: 2.75 MMBtu/hr (each) Cycle Therm regenerative thermal oxidizer used to control emissions from Leachate Management System (LMS) pretreatment and aeration tanks. Combusts natural gas. Also contains Perkins emergency generator (EP-021).

PROJECT DESCRIPTION

On June 27, 2016, Bridgeton Landfill, LLC submitted a construction permit application for the control of landfill gas. The installation currently uses flares to control landfill gas emissions. This permit allows the continued use of flares.

Due to the complicated flare permitting history, this permit supersedes all state and federally enforceable provisions from all previous construction permits except Project #2014-08-002 (County permits #7864 and #7865) which authorized construction of the two 2.75 MMBtu/hr natural gas fired thermal oxidizers for the leachate pretreatment plant (LPTP). This permit is not intended to supersede any local ordinances. This permit contains a new limitation of 100 tons per year of sulfur oxides to classify the installation as a minor source for construction permitting purposes.

Due to the unique characteristics of the landfill gas at this installation, compliance with the sulfur oxides emission limitation will be determined by periodic sampling and analysis. The permit requires the use of ASTM D5504-12, which quantifies the following sulfur compounds:

- | | |
|--------------------------|---------------------------|
| 1. Hydrogen Sulfide | 12. Thiophene |
| 2. Carbonyl Sulfide | 13. Isobutyl Mercaptan |
| 3. Methyl Mercaptan | 14. Diethyl Sulfide |
| 4. Ethyl Mercaptan | 15. n-Butyl Mercaptan |
| 5. Dimethyl Sulfide | 16. 3-Methylthiophene |
| 6. Carbon Disulfide | 17. Tetrahydrothiophene |
| 7. Dimethyl Disulfide | 18. 2,5-Dimethylthiophene |
| 8. Isopropyl Mercaptan | 19. 2-Ethylthiophene |
| 9. tert-Butyl Mercaptan | 20. Diethyl Disulfide |
| 10. n-Propyl Mercaptan | 21. Dimethyl Trisulfide |
| 11. Ethyl Methyl Sulfide | |

Because the sulfur emissions are expected to decrease over time, this permit allows for a graduated sampling schedule.

Previous permits contained a 250 ton/year carbon monoxide emission limitation. These permits have been superseded. Potential to emit calculations for carbon monoxide are shown below:

Basis:

Total flare capacity=14,000 SCFM

Methane content of LFG=15%

Emission factor: 62.4 lb CO/MMCF methane, derived from the AP42 draft Section 2.4 background document

$$\frac{14,000 \text{ scf}}{\text{min}} \times \frac{60 \text{ min}}{\text{hr}} \times \frac{8760 \text{ hr}}{\text{yr}} \times 15\% \text{ methane} \times \frac{62.4 \text{ lb CO}}{\text{MMSCF methane}} \times \frac{1 \text{ MMSCF}}{10^6 \text{ scf}} \times \frac{1 \text{ ton}}{2000 \text{ lb}} = 34 \frac{\text{ton CO}}{\text{year}}$$

Conducting a back calculation using these values to determine the maximum methane content needed to achieve emissions of 250 tons CO per year indicate a methane percentage in excess of 100% is needed. It is highly unlikely that the methane percentage would surpass this value, therefore the 250 ton CO per year limitation is not necessary and has not been carried forward into this permit.

EMISSIONS/CONTROLS EVALUATION

The emission factors and control efficiencies used in this analysis were obtained from the EPA document AP-42, *Compilation of Air Pollutant Emission Factors*, Fifth Edition, and from site specific testing conducted January 5 through September 7, 2016, as well as VOC testing conducted in 2015. The selected landfill gas data used for this permit is summarized in Table 4. These values reflect historical conditions and may not affect future conditions.

Table 4: Landfill gas characteristics for permit basis, 2016 data unless noted

Parameter	Value	Units	Notes
Landfill gas flow rate	3100	scfm	The maximum recorded flow value is 3025 scfm. Using 3100 is most conservative.
Net heating value	164.4	Btu/ft3	Maximum value
Methane fraction	13	%	Maximum value
LFG temperature	25	C	Ranged from 13 to 65. Using 25 is most conservative.
VOC concentration	6857	ppmv as hexane	2015 testing data
TRS concentration	2200	ppmv	Maximum value

The following table provides an emissions summary for this project. Flare potentials are based on Table 4 data, including flow rate, and do not include any emissions from the use of natural gas as a flare assist gas. This permit establishes a new 100 ton per year plant wide limitation for SO₂ emissions. This installation is located in a PM_{2.5} non-attainment area, which requires potential emissions to remain less than 100 ton/year for PM_{2.5} and precursors (SO₂) to avoid non-attainment NSR review.

Table 5: Emissions Summary (tpy, except as noted)

Pollutant	Regulatory <i>De Minimis</i> Levels	Existing Actual Emissions (2016 EIQ)	Potential Emissions of the Flares	Condition Potentials of this permit
PM/ PM ₁₀ / PM _{2.5}	25.0/15.0/1 0.0	1.67	1.81	N/A
SO ₂	40.0	148.33	293.27	<100 installation
NO _x	40.0	7.88	4.27	N/A
VOC	40.0	5.15	12.29	N/A
CO	100.0	42.77	6.66	N/A
GHG (CO ₂ e)	NA	9493 ¹	ND	N/A
GHG (mass)	NA	NR	ND	N/A
HAPs	10.0/25.0	7.31	3.96	N/A
Largest HAP- Hydrogen Chloride	10	1.42	3.28	N/A

ND=not determined

N/A=not applicable

¹Data from EPA's Greenhouse Gas Reporting Program. Data is reported in metric tons per year and excludes biogenic sources. All other actual emissions data obtained from MOEIS in units of tons per year.

PERMIT RULE APPLICABILITY

This review was conducted in accordance with Section (6) of Missouri State Rule 10 CSR 10-6.060, *Construction Permits Required*. Potential emissions of SO₂ are conditioned below major source levels.

APPLICABLE REQUIREMENTS

Bridgeton Landfill, LLC shall comply with the following applicable requirements. The Missouri Air Conservation Laws and Regulations should be consulted for specific record keeping, monitoring, and reporting requirements. Compliance with these emission standards, based on information submitted in the application, has been verified at the time this application was approved. For a complete list of applicable requirements for your installation, please consult the operating permit.

GENERAL REQUIREMENTS

- *Operating Permits*, 10 CSR 10-6.065
- *Start-Up, Shutdown, and Malfunction Conditions*, 10 CSR 10-6.050
- *Submission of Emission Data, Emission Fees and Process Information*, 10 CSR 10-6.110

- *Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin*, 10 CSR 10-6.170
- *Restriction of Emission of Visible Air Contaminants*, 10 CSR 10-6.220
- *Restriction of Emission of Odors*, 10 CSR 10-6.165

SPECIFIC REQUIREMENTS

- *New Source Performance Regulations*, 10 CSR 10-6.070
 - *Standards of Performance for Municipal Solid Waste Landfills* 40 CFR Part 60, Subpart WWW
- *MACT Regulations*, 10 CSR 10-6.075
 - *National Emission Standards for Hazardous Air Pollutants: Municipal Solid Waste Landfills*, 40 CFR Part 63, Subpart AAAA
- *Control of Sulfur Dioxide Emissions*, 10 CSR 10-6.261

AMBIENT AIR QUALITY IMPACT ANALYSIS

Ambient air quality modeling was conducted for the operation of the flares and the two natural gas fired thermal oxidizers. Modeling was based off 2016 actual data, summarized in the table below. The modeling for the 1 hour SO₂ standard used the maximum values, while modeling for the annual SO₂ standard used the highest values of the 95% statistical confidence range. The values are presented in the table below. For the results, see the ambient air quality impact analysis document dated February 9, 2017. Actual 2017 data indicates SO₂ emissions are less than those modeled.

Table 6: Modeling data, 2016 data

Landfill gas parameter (units)	Max value (1 hour standard)	Highest 95% statistical confidence range value (annual standard)
TRS (ppmv)	2200	1449
LFG flow rate (DSCFM)	3025	2557
LFG temperature (C)	25	25
SO ₂ emission rate (lb/hr)	65	36

AMBIENT AIR QUALITY MONITORING

The department operates an SO₂ monitor located at the Rider Trail, I-70 monitoring site. This site is located at 13080 Hollenberg Drive in Bridgeton. The monitor has collected SO₂ data since May 20, 2016. Annual monitoring data indicates values were 14 ppb for 2016, and 15 ppb for 2017. These values are well below the SO₂ standard of 75 ppb.

Additionally, Bridgeton Landfill has installed and operates two SO₂ monitors, located in Spanish Village and along St. Charles Rock Road. The devices collect hourly SO₂ measurements and populate the data in real time online, with results located at the following website: <http://www.bridgetonlandfill.com/so2-monitoring>.

STAFF RECOMMENDATION

On the basis of this review conducted in accordance with Section (6), Missouri State Rule 10 CSR 10-6.060, *Construction Permits Required*, it is recommended that this permit be granted with special conditions.

PERMIT DOCUMENTS

The following documents are incorporated by reference into this permit:

- The Application for Authority to Construct form, dated June 27, 2016, designating Bridgeton Landfill, LLC as the owner and operator of the installation.
- Ambient Air Quality Analysis for Bridgeton Landfill, LLC, dated February 9, 2017

Attachment Actual SO₂ Emissions

The permittee shall use this attachment, or an equivalent, to calculate the actual plant wide SO₂ emissions. This attachment, or an equivalent, shall be used to demonstrate compliance with the Plant Wide Emission Limitations in Special Condition 2.

Calculation Methodology:

1. The specified time period for all sampling is defined in Table 1.
2. The permittee shall use Equation 1 to quantify the sulfur dioxide emissions from the combustion of all flares (EP-011, EP-012, EP-013, and EP-014), based on the sample results and the time period associated with the sample.
3. The permittee shall use Equation 2 to quantify the sulfur dioxide emissions from all other emission sources.
4. The permittee shall use Equation 3 to sum the values from Equations 1 and 2.

Equation 1: Sulfur dioxide emissions from the combustion of landfill gas

$$SO_{2-EQ1} = \frac{Q_{LFG} * \left(\frac{C_{sulfur,ppmv}}{10^6}\right) * \left(\frac{0.02832 \text{ m}^3}{\text{ft}^3}\right) * (MW_{sulfur}) * \left(\frac{0.00220462 \text{ lb}}{\text{g}}\right) * (P) * \left(\frac{1 \text{ ton}}{2,000 \text{ lb}}\right) * (2)}{(R * (273.15 + T))}$$

Where:

SO_{2-EQ1} = SO₂ Emissions from the combustion of landfill gas in all flares (EP-011, 012, 013, and 014).

Q_{LFG} = Total flow of all collected landfill gas, in units of dry standard cubic feet (DSCF) from the previous sampling date to the current sampling date

$C_{sulfur,ppmv}$ = sampling results from ASTM D5504-12 for the current sampling date, in units of parts per million by volume.

MW_{sulfur} = $32.06 \frac{\text{g}}{\text{g-mol}}$.

P = 1 atm, standard atmospheric pressure.

2 = molecular ratio of sulfur to SO₂.

R = ideal gas law constant, $\frac{8.205 \times 10^{-5} \text{ m}^3 * \text{atm}}{\text{K} * \text{g-mol}}$.

T = 25°C or site specific LFG temperature

Equation 2: Sulfur dioxide emissions from all other sources

$$SO_{2-EQ2} = SO_{2-NG} + SO_{2-EmGen} + SO_{2-LMS}$$

Where:

SO_{2-EQ2} = SO₂ emissions from all sources not included in Equation 1.

SO_{2-NG} = SO₂ emissions from the combustion of natural gas. Calculated by multiplying the plant wide natural gas usage from all sources (in MMSCF) for the specified time period by 0.6 lb SO₂/MMSCF (AP42, Table 1.4-2), then dividing by 2000 lb/ton. Sources must include the following emission points: all flares using natural gas assist and all other emission units that combust natural gas except the leachate management system thermal

Attachment Actual SO₂ Emissions

oxidizer units. Emissions from the thermal oxidizers (EP-RTO#1 and RTO#2) are not included here, as they are included in the calculation of SO_{2-LMS} .

$SO_{2-EmGen}$ = SO₂ emissions from the combustion of #2 fuel oil in the emergency generators, and any other sources that combust #2 fuel oil. For the emergency generators, emissions shall be calculated by using the following emission factors, and multiplying by the number of hours each engine is used in the specified time period. These emission factors are based a fuel oil sulfur content of 15 ppmv, and the rated horsepower of each engine.

Emergency Generator	Emission factor (ton SO ₂ /hour)	Ef Source
EP-019	7.97x10 ⁻⁶	AP42, Table 3.4-1
EP-020	4.42x10 ⁻⁶	AP42, Table 3.3-1
EP-021	2.55x10 ⁻⁴	AP42, Table 3.4-1

SO_{2-LMS} = SO₂ emissions from the leachate management system process. Includes natural gas combustion and volatized sulfur in leachate tanks. Volatized sulfur emissions are estimated based on testing data which indicates 99 tons per year of sulfur passes through the leachate system, of which 1.7% volatizes. Each ton of volatized sulfur creates two tons of SO₂ when combusted. Potential SO₂ emissions from volatized sulfur are estimated at 3.37 tons/year (0.28 tons/month). Natural gas combustion emissions are estimated using the natural gas throughput in MMSCF/month and the emission factor 0.6 lb SO₂/MMSCF from AP 42 Table 1.4-2. In lieu of calculating actual emissions, the permittee may use the potential emissions of 3.38 tons/year (0.28 tons/month).

Equation 3:

$$SO_{2\ total} = SO_{2-EQ1} + SO_{2-EQ2}$$

Where:

$$SO_{2\ total} = \text{total plant wide emissions of SO}_2 \text{ from all sources}$$

The permittee shall record a monthly and 12 month rolling sum of $SO_{2-total}$ as shown in the following table. For the first twelve months after issuance of this permit, the permittee shall conduct this calculation on the 1st and 15th of every month. After this initial twelve month period, the testing schedule is dependent upon the 12 month rolling total emissions, as outlined in Table 1.

Attachment Actual SO₂ Emissions

Calculation of 12 month rolling total for month/year: _____

Sampling dates	<i>SO₂ total</i>
Sampling on the 1 st of this month, Equation 3:	
Sampling on the 15 th of this month, Equation 3:	
[A] Sum of the items above for the current month:	
Calculation of Rolling 12 month sum	
(1) Total Emissions for this month [A]:	
(2) Previous consecutive 11 month emissions total from previous month's worksheets:	
(3) Current consecutive 12 month sum [(1) + (2)]	

*SSM emissions are required to be reported to the Air Pollution Control Program's Compliance/Enforcement Section according to the provisions of 10 CSR 10-6.050. However, worst case SO₂ emissions occur when flares are operational 100% of the time. SSM of the flares is anticipated to decrease SO₂ emissions. As a conservative SO₂ emissions estimation method, there is no separate line item to account for SSM flare emissions.

Compliance with the Emission Limitation of Special Condition 2 is demonstrated when the current rolling 12 month sum (4) is less than 100.0 tons.
